

Metal reinforcement of the front belt intended for the Ford Mustang. The product is an ideal solution for owners of classic Mustangs who want to improve the rigidity of the structure, and consequently, the quality of handling.

Thanks to the use of reinforcement, the chassis is less prone to twisting while driving. The rigid system allows for more efficient operation of the steering system and, as a result, the entire suspension.

METAL CONSTRUCTION**MATERIAL:**
STRUCTURAL STEEL S355**REINFORCES THE FRONT PART**
OF THE ENGINE COMPARTMENT**ANTI-CORROSION PROTECTION**

**PRODUCT DESCRIPTION**

The reinforcement construction is based on a 2mm thick S355 structural steel sheet. The steel structure provides high strength. To protect against corrosion, a gold-colored galvanizing process was carried out. Bending was performed using a press brake.

The product is one of the components of a complete Trapez suspension kit. The design provides for the reinforcement to be mounted by welding.

MAIN PRODUCT FEATURES

- Improved stiffness and precision of the suspension
- Reduces twisting of the car's structure
- Design developed in a CAD environment
- Cutting using laser cutting

THE KIT INCLUDES:

- Set of metal reinforcements (2 pcs.)

APPLICATION:

This product will fit the following model years of Ford Mustang vehicles:

Ford Mustang Fastback 1964/5-1966

Ford Mustang Fastback 1967-1968

Ford Mustang Coupe 1964/5-1966

Ford Mustang Coupe 1967-1968

Ford Mustang Convertible 1964/5-1966

Ford Mustang Convertible 1967-1968

INSTALLATION INSTRUCTIONS:

Technical data sheet

DIFFICULTY LEVEL:

Advanced - welding skills are required to install the part

NOTES:

*Before purchasing, make sure that the product fits your car.
