

Titanium exhaust tips are lightweight and durable components of the exhaust system, combining high resistance to temperature with a unique, sporty appearance. Thanks to the use of titanium, they are significantly lighter than their steel counterparts, and the anodized finish gives them an exclusive look and additional protection.

They enhance aesthetics, making them an ideal solution for tuning enthusiasts and sports modifications.

CORROSION RESISTANCE

PRODUCT DESCRIPTION

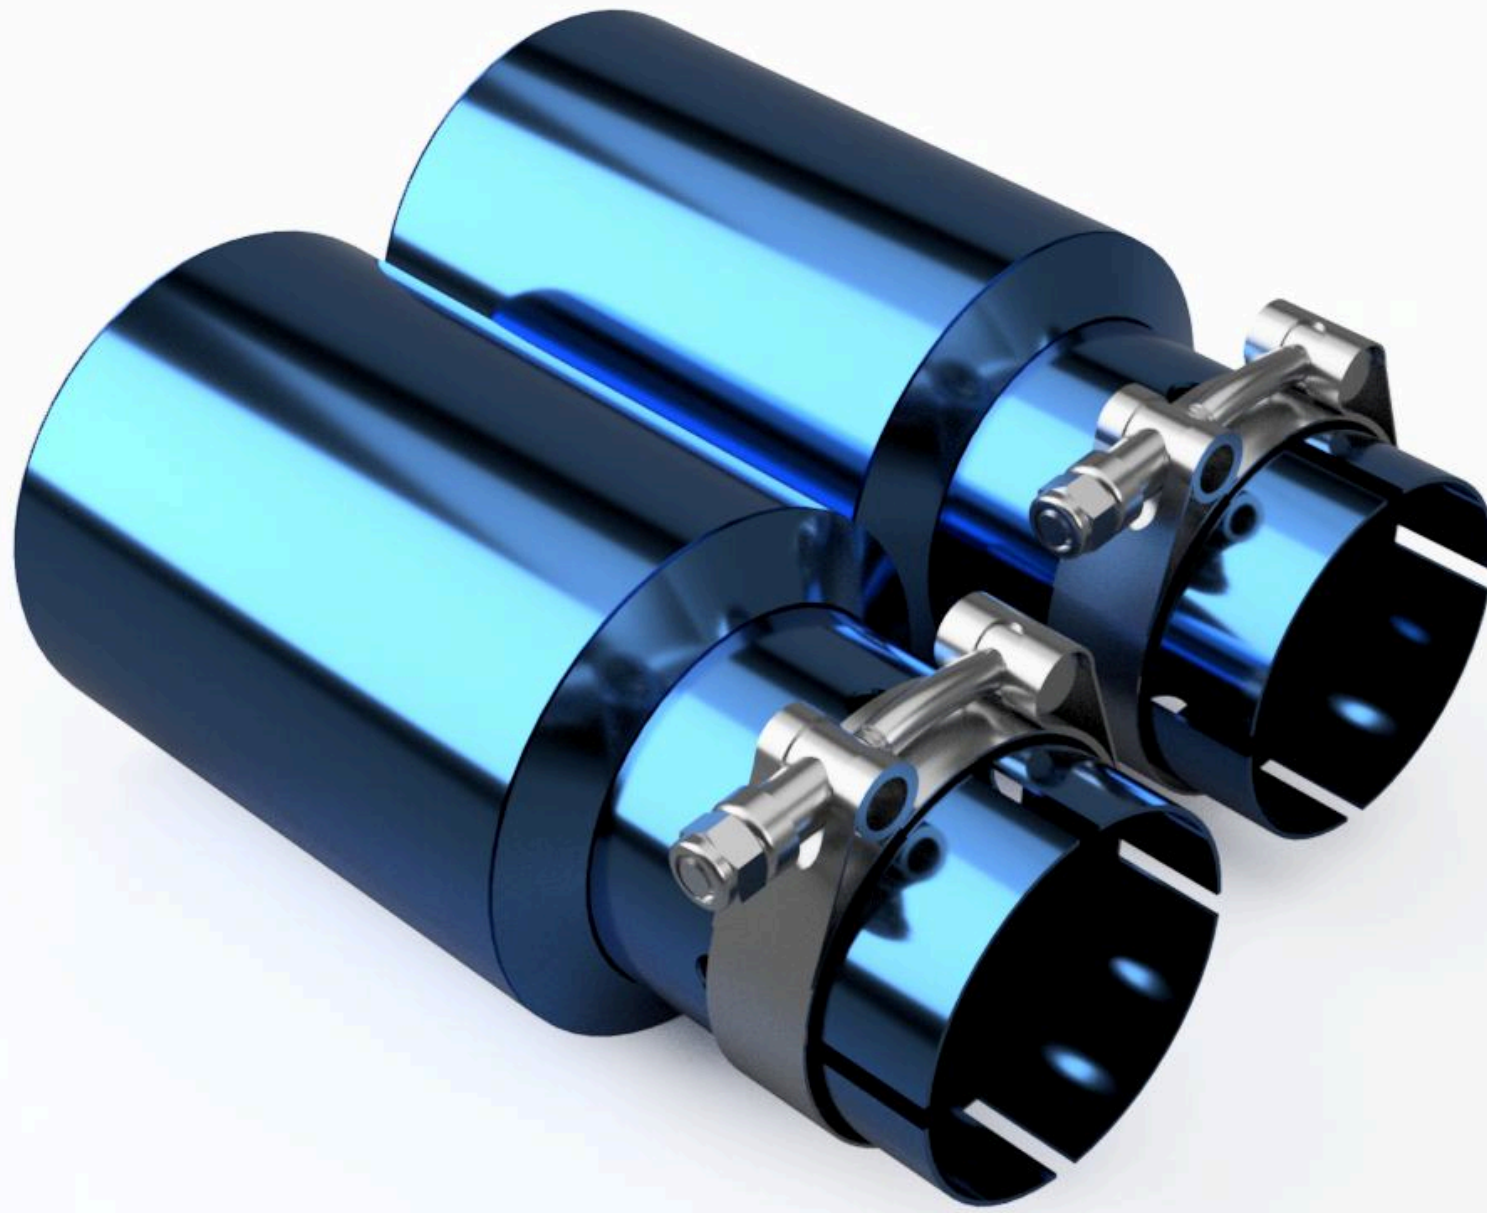

Precisely made titanium tips with the option to tighten the clamp screw, which is included in the set. The product has undergone an anodizing process, giving it a unique design. The pipes have been cut using a precise 3D laser, ensuring high repeatability and perfect fit. The welding of the components has been done using TIG technology, with the use of Argon gas shielding.

Titanium is resistant to high temperatures and chemicals, which makes exhaust tips made from this material have a longer lifespan. It also has very good anti-corrosive properties. There is a possibility to manufacture tips for a specific size.

MAIN PRODUCT FEATURES

- Lightweight and durability – Titanium Grade 2 is a material used in motorsport and aviation because it is exceptionally light, resistant to high temperatures and corrosion. Compared to stainless steel, it offers better durability and less weight.
- Perfect for both tuning and luxury cars - they fit well with both aggressive designs and elegant premium vehicles.
- Welded using TIG technology
- Modern design - gives the car a professional, sporty look

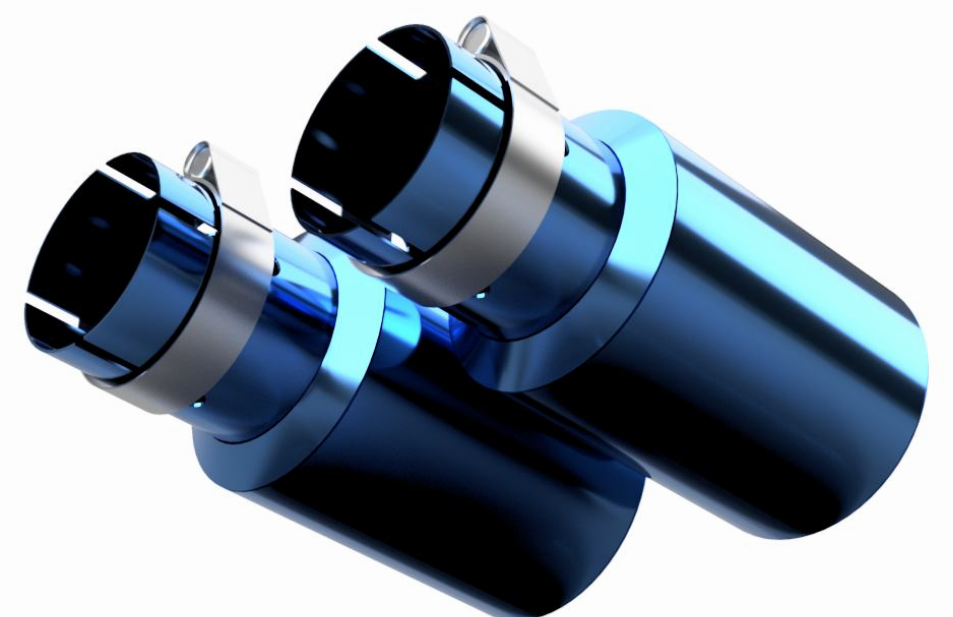

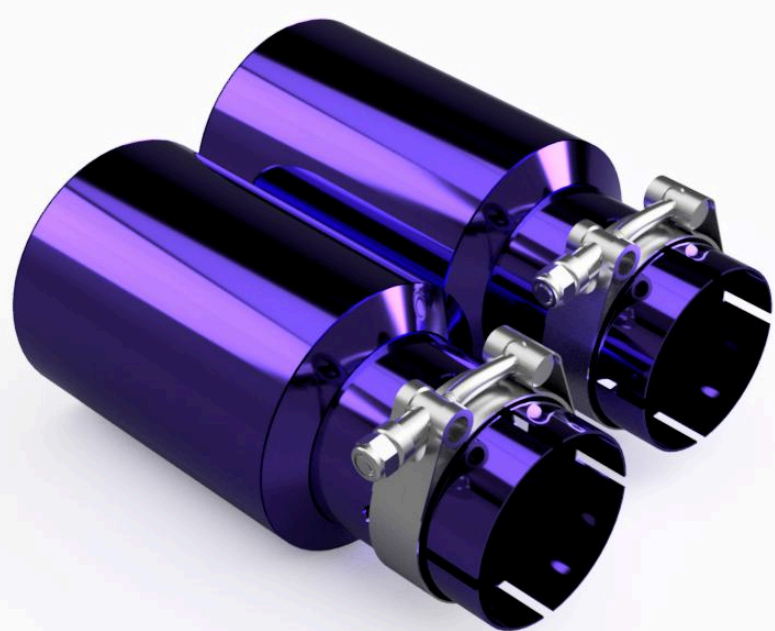

THE SET INCLUDES:

- Exhaust tips (2 pcs.)
- Clamping clamp (2 pcs.)

APPLICATION:

The product is intended for a wide range of applications in sports, racing, and tuning vehicles.

INSTALLATION INSTRUCTIONS:

Technical data sheet

DIFFICULTY LEVEL:

Easy

NOTES:

*Before purchasing, make sure that the product fits your car
