

A premium braking solution from Wilwood, engineered as a comprehensive upgrade for the rear axle of classic Ford Mustang models. This system allows for a seamless conversion from factory drum brakes to high-performance disc brakes, specifically solving the issue of limited clearance within the wheel barrel. An ideal choice for projects where maintaining a classic aesthetic while significantly improving safety and braking efficiency is a priority.

4-PISTON FORGED WILWOOD CALIPERS**INTERNAL PARKING BRAKE SYSTEM****DRILLED & SLOTTED VENTED ROTORS****LOW-PROFILE DESIGN**

**PRODUCT DESCRIPTION:**

The Wilwood Forged Dynapro Low-Profile brake kit represents an advanced modification for the rear axle braking system. The system has been developed for direct integration with Small Ford (8" and 9") axle flanges, ensuring a professional fit in factory mounting locations. The design utilizes forged Dynapro calipers, characterized by exceptional rigidity and actuation precision, eliminating the "spongy" brake pedal feel. The included SRP series rotors are vented, drilled, and slotted, which translates to effective heat dissipation and a consistent friction coefficient even under repeated heavy braking. The rotor diameter is 11 inches (280 mm). All kit components are manufactured from corrosion-resistant materials, and the calipers are finished in a durable red powder coating, emphasizing the vehicle's sporty character while ensuring an aesthetic appearance for years of service.

KEY PRODUCT FEATURES:

- Compact Wilwood caliper construction allows for the retention of wheels starting from 14 inches in diameter.
- Significant improvement in stopping power and modulation compared to the original drum brake setup.
- Integrated, internal "Drum-in-Hat" parking brake mechanism provides a clean axle appearance.
- Utilization of lightweight aircraft-grade aluminum alloys to reduce unsprung weight.
- All connections within the kit are designed for maximum sealing integrity and mounting alignment.

FORD MUSTANG / SMALL FORD 8" & 9" (MUSTANG 64-73 / RESTOMOD)

PRODUCT CODE: WIL-140-11403-DR

SET INCLUDES:

- Wilwood Forged Dynapro Low-Profile 4-piston calipers (2 pcs)
- SRP drilled and slotted vented rotors (2 pcs)
- Wilwood BP-10 SmartPad brake pads
- Parking brake assembly with shoes and adapters
- Mounting brackets dedicated to Small Ford axles
- Complete set of necessary bolts and mounting hardware

APPLICATION:

Product dedicated to the following models equipped with a Small Ford axle:

- 1964-1973 Ford Mustang (Fastback / Convertible)
- Vehicles with 8" / 9" rear ends with the following parameters:
 - Flange Type: Small Ford
 - Offset: 2.50" (63.5 mm)
 - Flange Bolt Pattern: 3.335" x 2.00"

DIFFICULTY LEVEL:

Intermediate. Intended for installation by qualified individuals.

NOTES:

Before purchase, please verify the technical parameters of the rear axle and the available clearance within your specific wheels.
